SUBJECT INDEX

to Volume 121, January–April 1989

Actin, suppressors of yeast mutations, 659, 675
Aedes albopictus, 539
Alcohol dehydrogenase, *copia* insertion, *Drosophila melanogaster*, 787
Allele
  agouti locus deletion, mouse, 811
  ash-1/ash-2/trithorax genes, functional relation, *Drosophila melanogaster*, 517
  frequency, temporal changes, estimating effective population size, 379
  inbred plant genetic variation, soybean, 359
  infinite model, twenty-five years ago, 631
  multiple, building block model, quantitative genetics, 839
  phylogenies, detection of small amounts, *Amia calva*, 609
Amia calva, phylogenies of alleles, detection of small amounts, gene flow, 609
Androgen receptor, testis-determining region, homology, human *ZFY* locus, 803
Aspergillus nidulans, *y*A locus, molecular characterization, 249
Autocorrelation
  distribution of genotypes, populations, lodgepole pine, 369
  spatial, analysis, migration and selection, 845

Bacillus subtilis, DNA repair, evolution of transformation, 411
Bacteria, preadaptive mutants, replica plating, indirect selection, 395
Bacteriophage *lambda*
  Cro/operator interaction, 5
  rap inhibition of growth, 401
Bacteriophage P22
  tail protein gene, fine structure genetic and physical map, 13
  tailspike protein gene, missense and nonsense mutations, 635
Beetle, troglobitic, population studies, 571

Caenorhabditis elegans, 1, 47, 57, 501, 703, 723
Calcium, defective control mechanism in mutants, characterization, *Paramecium tetraurelia*, 491
Calcium channel, perspectives, 201
Carcinogenesis, mechanisms of mutagenesis, *Escherichia coli*, 205
Centromere, molecular genetic variation, chromosome *X*, *Drosophila ananassae*, 89
Chiasmata, recombination nodules in spermatocytes, meiosis, *Mesostoma ehrenbergii*, 255
Chloroacetaldehyde, mechanisms of mutagenesis, *Escherichia coli*, 205
Chloroplast, *Tolmiea menziesii*, DNA variation, 819
Chromosome
  aberrant segregation, *CEN3* mutations, yeast, 477
  double deletion, *Neurospora crassa* mitochondrial chromosome, 685
  rearrangements, role of *recBC* function, *Salmonella typhimurium*, 433
  recombination and replication, plasmid-like derivatives, *Neurospora crassa*, 693
  second, female sterile mutations, *Drosophila melanogaster*, 101
Chromosome *B*, B-A translocations, mapping RFLP loci, maize, 583
Chromosome *2R*, *Punch-tudor* region, cytogenetic analysis, *Drosophila melanogaster*, 273
Chromosome *X*
  Dp-X recombination, *Caenorhabditis elegans*, 723
  genetics of postzygotic isolation, *Drosophila virilis* group, 527
  loci at base, developmental genetics, *Drosophila melanogaster*, 313
  molecular genetic variation, centromeric region, *Drosophila ananassae*, 89
  three-dimensional organization of polytene nuclei, *Drosophila melanogaster*, 293
  zygotic lethals with maternal effect phenotypes, *Drosophila melanogaster*, 333
Cistron, rDNA, patterns of variation, mosquito, 539
Conidial laccase, molecular characterization, *Aspergillus nidulans* *y*A locus, 249
Courtship, behavior and cytogenetics, *fruitless*, *Drosophila melanogaster*, 773
C4 protein, Slp protein levels and, haplotype-specific interactions, mouse, 795
Cricket, molecular population genetics, mtDNA size variation, 551
Cytoskeleton, suppressors, yeast actin mutations, 659, 675

Deletion
  double, *Neurospora crassa* mitochondrial chromosome, 685
  location of endpoints, palindromy, *Escherichia coli*, 651
Diploidization, arrest of micronuclear DNA replication, genomic exclusion, *Tetrahymena thermophila*, 37
Disequilibrium, linkage, genetic variances, mutation-selection balance, 857
DNA
  arrest of micronuclear replication, genomic exclusion, 37
  Cro/operator interaction, phage λ, 5

mismatch repair
mutator *mutD5*, 205
recombination, *Streptococcus pneumoniae*, 29
repair, evolution of transformation, *Bacillus subtilis*, 411
variation, *Tolmiea menziesii* chloroplast, 819
DNA, mitochondrial, size variation, molecular population genetics, crickets, 551
DNA, ribosomal, cistron, patterns of variation, mosquito, 539
Dosage compensation, genes that implement hermaphrodite mode, *Caenorhabditis elegans*, 57
Drosophila ananassae, 89
Drosophila melanogaster, 77, 101, 201, 263, 273, 293, 313, 333, 517, 739, 751, 765, 773, 787
Drosophila simulans, 281
Drosophila virilis, 527
Duplication
segregation distortion, *Responder* locus, *Drosophila melanogaster*, 739
small *X*-chromosome and *X* chromosome, recombination, *Caenorhabditis elegans*, 723
Dwarfism, gibberellin-insensitive, maize, 827

Element
copia, alcohol dehydrogenase gene insertion, *Drosophila melanogaster*, 787
cryptic Suppressor-mutator, heritable activation, maize, 591
Embryogenesis, zygotic lethals with maternal effect phenotypes, *Drosophila melanogaster*, 333
Environment
genotype interactions, polygenic variation, model, 129
periodically changing, evolutionarily stable mutation, 163
population studies, endemic troglobitic beetle, 571
Epistasis, models of quantitative variation, flux, metabolic pathways, 869
Equilibrium, organelle gene diversity, comparison to nuclear genes, 613
Erythrocytes, fragility of, single locus control, mouse, 353
Escherichia coli, 205, 213, 401, 423, 651
Ethenocytosine, mechanisms of mutagenesis, chloroacetaldehyde, *Escherichia coli*, 213
Evolution
stability, kin interactions, quantitative inheritance, 877
transformation, DNA repair, *Bacillus subtilis*, 411

Fitness, evolutionary stability, kin interactions, quantitative inheritance, 877
Flux, models of quantitative variation, metabolic pathways, 869
Fusion, *MFα1* gene of yeast, 223

Gene
ash-1/ash-2/trithorax, functional relation, *Drosophila melanogaster*, 517
hermaphrodite mode, dosage compensation, *Caenorhabditis elegans*, 57
heterochronic *lin-14*, molecular genetics, *Caenorhabditis elegans*, 501
HOP1, yeast meiotic pairing gene, 445
MFα1, yeast, 223
recBC, two-step recombination model, *Salmonella typhimurium*, 433
Shaker/Hyperkinetic/ether á go-go, perspectives, 201
tail protein, bacteriophage P22, 13
yA locus, *Aspergillus nidulans*, molecular characterization, 249
Genome, *Caenorhabditis elegans*, 1
Genotype, environment interactions, polygenic variation, model, 129
Gibberellin, -insensitive dwarfism in maize, 827
β-Glucuronidase, synthesis following transcript accumulation, regulation of, mouse, 119

Haploidy, arrest of micronuclear DNA replication, genomic exclusion, *Tetrahymena thermophila*, 37
Heritability, nonparametric confidence interval estimators, expected selection response, 891
Hermaphrodite, mode of dosage compensation, *Caenorhabditis elegans*, 57
Heteroplasmic cells, organelle gene diversity, comparison to nuclear genes, 613
Hybrid dysgenesis, transformation with autonomous *P* elements, *Drosophila simulans*, 281

Inbreeding
depression, overdominance, self-fertilizing plant populations, 861
genetic variation in soybean, 359
Insertion sequences, IS*103*, natural population, *Escherichia coli*, 423
Ion channels, perspectives, 201

Linkage
maintenance of heritable variation, mutation-selection balance, 175
RPLP, mapping Mendelian factors, 185
Locus
agouti, deletion of, mouse, 811
base of *X* chromosome, developmental genetics, *Drosophila melanogaster*, 313
chromosome *X*, maternal effect phenotypes, *Drosophila melanogaster*, 333
control of extreme resistance, red cell osmotic lysis, mouse, 353
Punch-tudor, chromosome *2R*, *Drosophila melanogaster*, 273
Responder
genetic behavior, *Drosophila melanogaster*, 751
segregation distortion, *Drosophila melanogaster*,

739, 765
vermilion and *forked*, DNA polymorphism, *Drosophila ananassae*, 89
ZFY, testis-determining region, mouse, 803
Lysis, osmotic, erythrocyte fragility, mouse, 353

Maize
cryptic Suppressor-mutator elements, heritable activation, 591
dominant gibberellin-insensitive dwarfism, 827
mapping RFLP loci, B-A translocations, 583
pattern of *Ac* transposition, 125
Major histocompatibility complex
non-MHC genes, C4 and Slp protein levels, mouse, 795
t-complex and, coevolution, mouse, 139, 153
Mapping
Mendelian factors, RPLP linkage maps, 185
MFα1 gene of yeast, 223
RFLP loci in maize, B-A translocations, 583
Maternal effect, phenotypes, zygotic lethals, *Drosophila melanogaster*, 333
Mating, specificity, pheromones and receptors, yeast, 463
Meiosis
aberrant chromosome segregation, *CEN3* mutations, yeast, 477
HOP1 pairing gene in yeast, 445
recombination nodules, spermatocytes, test of correspondence, 255
reduced levels of recombination, yeast *mer1* mutants, 237
Meiotic drive, genetic behavior of *Responder* element, *Drosophila melanogaster*, 751
Mesostoma ehrenbergii ehrenbergii, meiosis, late recombination nodules, chiasmata, 255
Migration
organelle gene diversity, comparison to nuclear genes, 613
selection and, spatial autocorrelation, 845
Mitochondria
Neurospora crassa
double deletion, chromosome number change, 685
plasmid-like derivatives, recombination, 693
Model
genotype-environment interactions, maintenance, polygenic variation, 129
mutation-selection balance, linkage, maintenance of heritable variation, 175
Molecular neurobiology, perspectives, 201
Mosquito, patterns of variation, rDNA cistron, 539
Mouse
agouti locus deletion, 811
coevolution, major histocompatibility complex, *t*-complex, 139, 153
genetics of C4 and Slp protein levels, 795
genetics of erythrocyte fragility, 353
β-glucuronidase synthesis, transcript accumulation, 119
testis-determining region, homology, human *ZFY* locus, 803
Mutagenesis
mechanisms of, chloroacetaldehyde, *Escherichia coli*, 205
oligonucleotide-directed, *cis*-acting elements, *Drosophila melanogaster*, 77
Mutants
bacterial, replica plating, indirect selection, 395
Caenorhabditis elegans, motor neurons, egg laying, 703
defective calcium control mechanism, characterization, *Paramecium tetraurelia*, 491
Drosophila melanogaster, perspectives, 201
Escherichia coli, phage genetic sites, λ growth inhibition, 401
fruitless, courtship defects, *Drosophila melanogaster*, 773
yeast *mer1*, reduced levels, meiotic recombination, 237
Mutations
ash-1/ash-2/trithorax genes, functional relation, *Drosophila melanogaster*, 517
bar, *rap* inhibition, λ phage growth, 401
CEN3, aberrant chromosome segregation, yeast, 477
evolutionarily stable, periodically changing environment, 163
maternal effect, second chromosome, *Drosophila melanogaster*, 101
missense and nonsense, bacteriophage P22 tailspike protein gene, 635
Punch-tudor region of chromosome *2R*, *Drosophila melanogaster*, 273
organelle gene diversity, comparison to nuclear genes, 613
-selection balance
genetic variances, linkage disequilibrium, 857
linkage, maintenance of heritable variation, 175
Mutators
mutD5, DNA mismatch repair, *Escherichia coli*, 205
Tc3 family, transposeable genetic elements, *Caenorhabditis elegans*, 47

Neuron, motor, egg laying defect, *Caenorhabditis elegans*, 703
Neurospora crassa
mitochondrial chromosome
double deletion, chromosome number change, 685
plasmid-like derivatives, recombination, 693
Nuclei, organelle gene diversity, 613

Oligonucleotide, -directed mutagenesis, *cis*-acting elements, *Drosophila melanogaster*, 77
Organelles, gene diversity, comparison to nuclear

genes, 613

Pairing, *Dp-X* recombination, *Caenorhabditis elegans*, 723
Palindromy, location of deletion endpoints, *Escherichia coli*, 651
Paramecium tetraurelia, mutants defective in calcium control mechanism, genetic and behavioral characterizations, 491
P elements, hybrid dysgenesis, *Drosophila simulans*, 281
Pheromones, receptors and, mating specificity, yeast, 463
Pine, distribution of genotypes, spatial autocorrelation analysis, 369
Polymorphism
  molecular genetic variation, chromosome *X*, *Drosophila ananassae*, 89
  restriction fragment length
    heterochronic gene *lin-14*, *Caenorhabditis elegans*, 501
    inbred plant genetic variation, soybean, 359
    mapping loci in maize, B-A translocations, 583
    mapping Mendelian factors, 185
Polytene nuclei, three-dimensional organization, compound *XY* or ring *X* chromosomes, *Drosophila melanogaster*, 293
Population
  building block model, quantitative genetics, 839
  distribution of genotypes, spatial autocorrelation analysis, 369
  estimating effective size, temporal changes, allele frequency, 379
  models of quantitative variation, flux, metabolic pathways, 869
  natural, insertion sequence IS*103*, *Escherichia coli*, 423
  nonparametric confidence interval estimators, heritability, expected selection response, 891
  patterns of variation in rDNA cistron, mosquito, 539
  studies on endemic troglobitic beetle, 571
Potassium channel, perspectives, 201
Promoter, definition of *cis*-acting elements, mutagenesis, *Drosophila melanogaster*, 77
Promoter elements, *MFα1* gene of yeast, 223
Proofreading, DNA mismatch repair, mutator *mutD5*, *Escherichia coli*, 205
Protein, Cro, operator interaction, phage λ, 5

Receptors, pheromones, mating specficity, yeast, 463
Recombination
  double deletion, *Neurospora crassa* mitochondrial chromosome, 685
  haplotype-specific interactions, C4 and Slp protein levels, mouse, 795
  meiotic, reduced levels, yeast *mer1* mutants, 237
  mismatch repair, *Streptococcus pneumoniae*, 29
  nodules in spermatocytes, meiosis, *Mesostoma ehrenbergii*, 255
  plasmid-like derivatives, mitochondrial chromosome, *Neurospora crassa*, 693
  small *X*-chromosome duplications, *X* chromosome, *Caenorhabditis elegans*, 723
  two-step model, role of *recBC* function, *Salmonella typhimurium*, 433
Replica plating, indirect selection and, bacterial mutants, 395
Reproduction
  courtship defects, *fruitless*, *Drosophila melanogaster*, 773
  genetics of postzygotic isolation, *Drosophila virilis* group, 527
Rhodopsin, definition of *cis*-acting elements, mutagenesis, *Drosophila melanogaster*, 77

Saccharomyces cerevisiae, 223, 445, 463, 477, 659
Salmonella typhimurium, 433, 635
Segregation, aberrant, *CEN3* mutations, yeast, 477
Segregation distortion
  coevolution, major histocompatibility complex and *t*-complex, mouse, 153
  cytogenetic analysis, *Drosophila melanogaster*, 765
  negative, *SD* system, *Drosophila melanogaster*, 263
  Responder element, genetic behavior, *Drosophila melanogaster*, 751
  Responder locus, free duplications, *Drosophila melanogaster*, 739
Selection
  distribution of genotypes, spatial autocorrelation analysis, pine, 369
  evolutionary stability, kin interactions, quantitative inheritance, 877
  expected response, heritability, nonparametric intervals, 891
  indirect, replica plating, bacterial mutants, 385
  migration and, spatial autocorrelation, 845
  mutation balance, genetic variances, linkage disequilibrium, 857
Self-fertilization, overdominance, inbreeding depression, plants, 861
Sex, motor neurons responsible for egg laying, defect, *Caenorhabditis elegans* mutants, 703
Sex-limited protein, C4 protein levels and, haplotype-specific interactions, mouse, 795
Sodium channel, perspectives, 201
Soybean, genetic variation in an inbred plant, 359
Speciation, genetics of postzygotic isolation, *Drosophila virilis* group, 527
Speonomus hydrophilus, 571
Spermatogenesis, genetic behavior of *Responder* element, *Drosophila melanogaster*, 751
Sterility, hybrid dysgenesis, *P* elements, *Drosophila simulans*, 281
Streptococcus pneumoniae, 29
Suppressors, yeast actin mutations, 659, 675

Synaptonemal complexes, recombination nodules in spermatocytes, meiosis, *Mesostoma ehrenbergii*, 255

t-complex, major histocompatibility complex and, coevolution, mouse, 139, 153
Testis-determining region, homologies to human *ZFY* locus, mouse, 803
Tetrahymena thermophila, arrest of micronuclear DNA replication, genomic exclusion, 37
Tolmiea menziesii, chloroplast DNA variation, 819
Transformation
  evolution of, DNA repair, *Bacillus subtilis*, 411
  hybrid dysgenesis, *P* elements, *Drosophila simulans*, 281
  mismatch repair, recombination, *Streptococcus pneumoniae*, 29
Transposeable element
  copia insertion, alcohol dehydrogenase gene, *Drosophila melanogaster*, 787
  Tc3 family, *Caenorhabditis elegans*, 47
Transposition, *Ac*, pattern of, maize, 125

Yeast
  aberrant chromosome segregation, *CEN3* mutations, 477
  HOP1 meiotic pairing gene, 445
  mating specificity, pheromones and receptors, 463
  mer1 mutants, reduced levels, meiotic recombination, 237
  MFα1 gene, 223
  suppressors of actin mutations, 659, 675

GENETICS

A PERIODICAL RECORD OF INVESTIGATIONS

BEARING ON HEREDITY AND VARIATION

GENETICS VOLUME 121, JANUARY–APRIL, 1989

EDITORIAL BOARD

JOHN W. DRAKE, *Editor*
Chapel Hill, North Carolina

SALLY LYMAN ALLEN (1991)
University of Michigan

DOROTHEA BENNETT (1990)
University of Texas, Austin

DAVID BOTSTEIN (1991)
Genentech, Inc.

JOHN E. BOYNTON (1989)
Duke University

ANTHONY H. D. BROWN (1991)
CSIRO Division of Plant Industry

BENJAMIN BURR (1989)
Brookhaven National Laboratory

MARIAN CARLSON (1990)
Columbia University

DEBORAH CHARLESWORTH (1991)
University of Chicago

PETER CHERBAS (1991)
Indiana University

ARTHUR CHOVNICK (1991)
University of Connecticut

ANDREW G. CLARK (1991)
Pennsylvania State University

VICTORIA G. FINNERTY (1990)
Emory University

MARGARET T. FULLER (1991)
University of Colorado, Boulder

ROGER E. GANSCHOW (1989)
Children's Hospital Research Foundation

WILLIAM M. GELBART (1990)
Harvard University

BARRY W. GLICKMAN (1989)
York University

MAUREEN R. HANSON (1989)
Cornell University

ROBERT K. HERMAN (1990)
University of Minnesota

RICHARD R. HUDSON (1989)
University of California, Irvine

NANCY A. JENKINS (1989)
National Cancer Institute

ELIZABETH JONES (1990)
Carnegie-Mellon University

NANCY KLECKNER (1990)
Harvard University

CATHY C. LAURIE (1991)
Duke University

WEN-HSIUNG LI (1991)
University of Texas, Houston

ROBERT L. METZENBERG (1990)
University of Wisconsin

GISELA MOSIG (1990)
Vanderbilt University

JEFFREY R. POWELL (1991)
Yale University

G. SHIRLEEN ROEDER (1991)
Yale University

JOHN ROTH (1990)
University of Utah

TRUDI SCHÜPBACH (1990)
Princeton University

TABLE OF CONTENTS

to Volume 121, January–April, 1989

ADAMS, ALISON E. M., and DAVID BOTSTEIN, Dominant suppressors of yeast actin mutations that are reciprocally suppressed 675–683

BARSH, GREGORY S., and CHARLES J. EPSTEIN, Physical and genetic characterization of a 75-kilobase deletion associated with a^l, a ressessive lethal allele at the mouse *agouti* locus 811–818

BENDER, ALAN, and GEORGE F. SPRAGUE, JR., Pheromones and pheromone receptors are the primary determinants of mating specificity in the yeast *Saccharomyces cerevisiae* 463–476

BENSON, NICHOLAS, and PHILIP YOUDERIAN, Phage λ Cro protein and *cI* repressor use two different patterns of specific protein-DNA interactions to achieve sequence specificity *in vivo* 5–12

BERGET, PETER B., and MONJULA CHIDAMBARAM, Fine structure genetic and physical map of the phage P22 tail protein gene 13–28

BIRKY, C. WILLIAM, JR., PAUL FUERST and TAKEO MARUYAMA, Organelle gene diversity under migration, mutation, and drift: equilibrium expectations, approach to equilibrium, effects of heteroplasmic cells, and comparison to nuclear genes 613–627

BLACK, WILLIAM C., IV, DENSON K. MCLAIN and KARAMJIT S. RAI, Patterns of variation in the rDNA cistron within and among world populations of a mosquito, *Aedes albopictus* (Skuse) 539–550

BRITTNACHER, JOHN G., and BARRY GANETZKY, On the components of segregation distortion in *Drosophila melangogaster*. IV. Construction and analysis of free duplications for the *Responder* locus 739–750

BRUISTEN, S. M., E. SKAMENE and P. DEMANT, Haplotype-specific interactions of non-*H-2*-linked genetic factors controlling the mouse C4 and Slp protein levels 795–801

BÜRGER, REINHARD, Linkage and the maintenance of heritable variation by mutation-selection balance 175–184

COLLINS, JOHN, ELIZABETH FORBES and PHILIP ANDERSON, The Tc3 family of transposable genetic elements in *Caenorhabditis elegans* 47–55

CROFT, JOY A., and GARETH H. JONES, Meiosis in *Mesostoma ehrenbergii ehrenbergii*. IV. Recombination nodules in spermatocytes and a test of the correspondence of late recombination nodules and chiasmata 255–262

CROUAU-ROY, BRIGITTE, Population studies on an endemic troglobitic beetle: geographical patterns of genetic variation, gene flow and genetic structure compared with morphometric data 571–582

CROW, JAMES F., Twenty-five years ago in GENETICS: the infinite allele model 631–634

DANIELS, STEPHEN B., ARTHUR CHOVNICK and MARGARET G. KIDWELL, Hybrid dysgenesis in *Drosophila simulans* lines transformed with autonomous *P* elements 281–291

DESAI, CHAND, and H. ROBERT HORVITZ, *Caenorhabditis elegans* mutants defective in the functioning of the motor neurons responsible for egg laying 703–721

ENGEBRECHT, JOANNE, and SHIRLEEN G. ROEDER, Yeast *mer1* mutants display reduced levels of meiotic recombination 237–247

EPPERSON, B. K., and R. W. ALLARD, Spatial autocorrelation analysis of the distribution of genotypes within populations of lodgepole pine 369–377

EVANS, THOMAS C., and DAVID L. NELSON, New mutants of *Paramecium tetraurelia* defective in a calcium control mechanism: genetic and behavioral characterizations 491–500

FEDOROFF, NINA, The heritable activation of *cryptic Suppressor-mutator* elements by an active element 591–608

FLESSEL, MONICA C., ANTHONY J. BRAKE, and JEREMY THORNER, The *MFα1* gene of *Saccharomyces cerevisiae*: genetic mapping and mutational analysis of promoter elements 223–236

GAILEY, DONALD A., and JEFFREY C. HALL, Behavior and cytogenetics of *fruitless* in *Drosophila melanogaster*: different courtship defects caused by separate, closely linked lesions 773–785

GANETZKY, BARRY, There's a whole lot of shaking going on 201–204

GASC, ANNE-MARIE, ARMAND-MICHEL SICARD and JEAN-PIERRE CLAVERYS, Repair of single- and multiple-substitution mismatches during recombination in *Streptococcus pneumoniae* 29–36

GAUDET, ARLENE, and MOLLY FITZGERALD-HAYES, Mutations in *CEN3* cause aberrant chromosome segregation during meiosis in *Saccharomyces cerevisiae* 477–489

GILLESPIE, JOHN H., and MICHAEL TURELLI, Genotype-environment interactions and the maintenance of polygenic variation 129–138

GROSS, SAMSON R., PEARL H. LEVINE, SHULA METZGER and GAD GLASER, Recombination and replication of plasmid-like derivatives of a short section of the mitochondrial of *Neurospora crassa* 693–701

GROSS, SAMSON R., ANN MARY and PEARL H. LEVINE, Change in chromosome number associated with a double deletion in the *Neurospora crassa* mitochondrial chromosome 685–691

GUZMÁN, PLINIO, and GABRIEL GUARNEROS, Phage genetic sites involved in growth inhibition by the *Escherichia coli rap* mutant 401–409

HALL, BARRY G., LAURA L. PARKER, PAUL W. BETTS, ROBERT F. DUBOSE, STANLEY A. SAWYER and DANIEL L. HARTL, IS*103*, a new insertion element in *Escherichia coli*: characterization and distribution in natural populations 423–431

HARBERD, NICHOLAS P., and MICHAEL FREELING, Genetics of dominant gibberellin-insensitive dwarfism in maize 827–838

HARPER, ALAN B., Evolutionary stability for interactions among kin under quantitative inheritance 877–889

HASTINGS, ALAN, Linkage disequilibrium and genetic variances under mutation-selection balance 857–860

HERMAN, ROBERT K., and CLAIRE K. KARI, recombination between small *X* chromosome duplications and the *X* chromosome in *Caenorhabditis elegans* 723–737

HIRAIZUMI, YUICHIRO, A possible case of negative segregation distortion in the *SD* system of *Drosophila melanogaster* 263–271

HODGKIN, JONATHAN, Early worms 1–3

HOLLINGSWORTH, NANCY M., and BRECK BYERS, *HOP1*: a yeast meiotic pairing gene ... 445–462

ISHII, KAZUSHIGE, HIROTSUGU MATSUDA, YOH IWASA, and AKIRA SASAKI, Evolutionarily stable mutation rate in a periodically changing environment 163–174

JACOBSEN, J. STEVEN, CHRISTOPHER P. PERKINS, JOHN T. CALLAHAN, KUMAR SAMBAMURTI and M. ZAFRI HUMAYUN, Mechanisms of mutagenesis by chloroacetaldehyde 213–222

KACZANOWSKI, ANDRZEJ, IWONA GORNICKA and GÜNTER CLEFFMANN, Arrest of micronuclear DNA replication during genomic exclusion in tetrahymena produces haploid strains 37–45

KEIGHTLEY, PETER D., Models of quantitative variation of flux in metabolic pathways ... 869–876

KNAPP, STEVEN J., WILLIAM C. BRIDGES, JR., and MING-HUI YANG, Nonparametric confidence interval estimators for heritability and expected selection response 891–898

LANDER, ERIC S., and DAVID BOTSTEIN, Mapping Mendelian factors underlying quantitative traits using RFLP linkage maps 185–199

LEDERBERG, JOSHUA, Replica plating and indirect selection of bacterial mutants: isolation of preadaptive mutants in bacteria by sib selection 395–399

LYTTLE, TERRENCE W., The effect of novel chromosome position and variable dose on the genetic behavior of the Responder (Rsp) element of the Segregation Distorter (SD) system of *Drosophila melanogaster* 751–763

MAHAN, MICHAEL J., and JOHN R. ROTH, Role of *recBC* function in formation of chromosomal rearrangements: a two-step model for recombination 433–443

MATHOG, DAVID, and JOHN W. SEDAT, The three-dimensional organization of polytene nuclei in male *Drosophila melanogaster* with compound *XY* or ring *X* chromosomes 293–311

MISMER, DRZISLAV, and GERALD M. RUBIN, Definition of *cis*-acting elements regulating expression of the *Drosophila melanogaster ninaE* opsin gene by oligonucleotide-directed mutagenesis 77–87

MITCHELL, MICHAEL, DOMINIQUE SIMON, NABEEL AFFARA, PHILIP AVNER and COLIN BISHOP, Localization of murine *X* and autosomal sequences homologous to the human *Y* located testis-determining region 803–809

NOVICK, PETER, BARBARA C. OSMOND and DAVID BOTSTEIN, Suppressors of yeast actin mutations 659–674

O'DONNELL, JANIS, ROBERT BOSWELL, THOMAS REYNOLDS and WILLIAM MACKAY, A cytogenetic analysis of the *Punch-tudor* region of chromosome *2R* in *Drosophila melanogaster* 273–280

O'HARA, EILEEN B., and WILLIAM E. TIMBERLAKE, Molecular characterization of the *Aspergillus nidulans yA* locus 249–254

ORR, H. ALLEN, and JERRY A. COYNE, The genetics of postzygotic isolation in the *Drosophila virilis* group 527–537

PERRIMON, NORBERT, LEE ENGSTROM and ANTHONY P. MAHOWALD, Zygotic lethals with specific maternal effect phenotypes in *Drosophila melanogaster*. I. Loci on the *X* chromosome 333–352

PERRIMON, NORBERT, DAVID SMOUSE and GEORGE L. GABOR MIKLOS, Developmental genetics of loci at the base of the *X* chromosome of *Drosophila melanogaster* 313–331

PIMPINELLI, SERGIO, and PATRIZIO DIMITRI, Cytogenetic analysis of segregation distortion in *Drosophila melanogaster*: the cytological organization of the Responder (*Rsp*) locus .. 765–772

PLENEFISCH, JOHN D., LESLIE DELONG and BARBARA J. MEYER, Genes that implement the hermaphrodite mode of dosage compensation in *Caenorhabditis elegans* 57–76

RAND, DAVID M., and RICHARD G. HARRISON, Molecular population genetics of mtDNA size variation in crickets 551–569

ROTH, E. JILL, BARBARA L. FRAZIER, NESTOR R. APUYA and KARL G. LARK, Genetic variation in an inbred plant: variation in tissue cultures of soybean [*Glycine max* (L.) Merrill] 359–368

RUVKUN, GARY, VICTOR AMBROS, ALAN COULSON, ROBERT WATERSTON, JOHN SULSTON and H. ROBERT HORVITZ, Molecular genetics of the *Caenorhabditis elegans* heterochronic gene *lin-14* 501–516

SCHAAPER, ROEL M., *Escherichia coli* mutator *mutD5* is defective in the *mutHLS* pathway of DNA mismatch repair 205–212

SCHAEFER, CATHERINE A., and MICHAEL J. DEWEY, Single locus (*rol*) control of extreme resistance to red cell osmotic lysis: intrinsic mode of gene action 353–358

SCHÜPBACH, TRUDI, and ERIC WIESCHAUS, Female sterile mutations on the second chromosome of *Drosophila melanogaster*. I. Maternal effect mutations 101–117

SCHWARTZ, DREW, Pattern of *Ac* transposition in maize 125–128

SCHWARZ, JOHN J., and PETER B. BERGET, The isolation and sequence of missense and nonsense mutations in the cloned bacteriophage P22 tailspike protein gene 635–649

SHEARN, ALLEN, The *ash-1, ash-2* and *trithorax* genes of *Drosophila melanogaster* are functionally related 517–525

SLATKIN, MONTGOMERY, Detecting small amounts of gene flow from phylogenies of alleles 609–612

SOKAL, ROBERT R., GEOFFREY M. JACQUEZ and MICHAEL C. WOOTEN, Spatial autocorrelation analysis of migration and selection 845–855

SOLTIS, DOUGLAS E., PAMELA S. SOLTIS, THOMAS A. RANKER and BRYAN D. NESS, Chloroplast DNA variation in a wild plant, *Tolmiea menziesii* 819–826

STEPHAN, WOLFGANG, and CHARLES H. LANGLEY, Molecular genetic variation in the centromeric region of the *X* chromosome in three *Drosophila ananassae* populations. I. Contrasts between the *vermilion* and *forked* loci 89–99

STRAND, DENNIS J., and JOHN F. MCDONALD, Insertion of a *copia* element 5′ to the *Drosophila melanogaster* alcohol dehydrogenase gene (*adh*) is associated with altered developmental and tissue-specific patterns of expression 787–794

TACHIDA, HIDENORI, and C. CLARK COCKERHAM, A building block model for quantitative genetics 839–844

UYENOYAMA, MARCY K., Coevolution of the major histocompatibility complex and the *t*-complex in the mouse. I. Generation and maintenance of high complementarity associations 139–151

UYENOYAMA, MARCY K., Coevolution of the major histocompatibility complex and the *t*-complex in the mouse. II. Modification of response to sharing of histocompatibility antigens 153–161

WAPLES, ROBIN S., A generalized approach for estimating effective population size from temporal changes in allele frequency 379–391

WAWRZYNIAK, CYNTHIA J., SUSAN A. MEREDITH and ROGER E. GANSCHOW, Two genetic elements regulate murine β-glucuronidase synthesis following transcript accumulation 119–124

WEBER, DAVID and TIM HELENTJARIS, Mapping RFLP loci in maize using B-A translocations 583–590

WESTON-HAFER, KATHLEEN, and DOUGLAS E. BERG, Palindromy and the location of deletion endpoints in *Escherichia coli* 651–658

WOJCIECHOWSKI, MARTIN F., MARY A. HOELZER and RICHARD E. MICHOD, DNA repair and the evolution of transformation in *Bacillus subtilis*. II. Role of inducible repair ... 411–422

ZIEHE, MARTIN, and J. H. ROBERDS, Inbreeding depression due to overdominance in partially self-fertilizing plant populations 861–868
